

Approximate Parallel Scheduling, Vol. 2: Part II: Applications to Optimal Parallel Graph Algorithms in Logarithmic Time (Classic Reprint)

By Richard Cole

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Approximate Parallel Scheduling, Vol. 2: Part II: Applications to Optimal Parallel Graph Algorithms in Logarithmic Time Part I of this paper presented a novel technique for approximate parallel scheduling and a new logarithmic time optimal parallel algorithm for the list ranking problem. In this part, we give a new logarithmic time parallel (Pram) algorithm for computing the connected components of undirected graphs which uses this scheduling technique. The connectivity algorithm is optimal unless $m = o(n \log n)$, in graphs of n vertices and m edges. Using known results, this new algorithms imply logarithmic time optimal parallel algorithms for a number of other graph problems, including: biconnectivity, Euler tours, strong orientation and r -numbering. Another contribution of the present paper is a parallel union/find algorithm. To the best of our knowledge, this paper presents for the first time optimal, logarithmic time, parallel algorithms for problems on graphs. 1. Introduction The models of parallel computation used in this paper are all members of the parallel random, access machine (Pram) family. A Pram employs? synchronous processors all having access...

Reviews

This is the finest book i have got study right up until now. I am quite late in start reading this one, but better then never. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Keanu Johns**

This is the finest book i have read until now. It is filled with wisdom and knowledge You can expect to like just how the author compose this ebook.
